Recruiting Manager
AURORA Software Engineer / Embedded / C++
Lockheed Martin
Orlando, FL, 32819

February 24, 2026

Dear Recruiting Manager,

I am writing to express my interest to your job posting for a Software Engineer role at Lockheed Martin. Lockheed Martin has a reputable presence in the University of Central Florida through its CWEP program and frequent visits, I would be honored to work there. Exposure to employees at Lockheed Martin established this challenging, rewarding, and team-based work culture. The variety of areas of work and the values of the company set up a career with diverse explorations that fits my ambition.

My involvement with UCF's Girls Who Code has given me insightful experience of designing and working in team based scenarios through projects and events. Being a member has allowed me to be in an environment of constant growth, innovation, and collaboration through its culture. I am currently designing and developing a game with my peers using Godot game engine, strengthening my problem-solving and independent learning with new technologies. Through the Lead Scholars Program, I developed a deeper understanding of leadership and team dynamics. With my group, I have been able to research team efficiencies through on-site community service and recognized conflict patterns. My challenging coursework has honed my creative thinking skills through various languages such as C and Java. As a result, I am an effective communicator who is able to adapt and innovate to many difficult scenarios outside and inside my professional career.

I am eager to bring my skills, leadership experience, and dedication to Lockheed Martin. I welcome the opportunity to further discuss the role and my fit for this position. Thank you for your consideration and your time.

Sincerely,

A handwritten signature in black ink, appearing to read 'Brittany Torres Navarro', with a stylized flourish at the end.

Brittany Torres Navarro
